MANAGEMENT

What is **CHIROPRACTIC CARE**

The word “**chiropractic**” comes from ancient Greek & means “**done by hand.**”

Adjustment of the joints of the body has been used in the healing arts for many centuries and is at the heart of modern chiropractic care.

Chiropractors are specialists in manual adjustment of the vertebrae of the spine & other joints. Adjustment helps relieve pain and restore normal functioning to the spine, joints and supporting structures of the body – so you can enjoy your everyday activities again as quickly as possible.

Chiropractors are also trained to prescribe therapeutic exercise, provide nutritional counselling, and recommend rehabilitation and injury prevention strategies.

Benefits of **CHIROPRACTIC CARE**

Chiropractic treatment is skilled, hands-on health care that relieves pain and helps your body be its best. Here are some of the ways it can help you.

Improved movement in your neck, shoulders, back and torso

- Better posture
- Relief from headaches, neck and back pain
- Prevention of work-related muscle and joint injuries
- Enhanced athletic performance
- Improved flexibility
- Relief of pregnancy-related back ache
- Correction of gait and foot problems

When should I consider **CHIROPRACTIC CARE**

There are many reasons to seek chiropractic care. Work, accidents, sports injuries, household chores, even the stress of daily living can cause painful joint and spinal problems. Even if you do not have painful symptoms, chiropractic care can help you maintain healthy spine and joint function.

Here are some of the most common reasons why more than **4 million** Canadians visit a chiropractor each year.

- Back Pain
- Neck Pain
- Headache
- Whiplash
- Strains & Sprains From Daily Activities
- Repetitive Strain Injuries
- Work & Sports-Related Injuries
- Arthritis
- Restricted Movement in the Back, Shoulders, Neck or Limbs
- General Health & Well-Being

What can you **EXPECT**

At your initial visit, your chiropractor will ask questions about your health history and perform a physical exam, with particular attention to your spine. Your chiropractor may also recommend other examinations or tests, such as X-rays.

Did You Know?

Eight out of ten Canadians will experience back pain at some point in their life, and at least one third of people in Ontario will have back pain at any given time. Many more people experience other problems with their muscles, bones, joints & nerves. For many people, the pain can keep them away from work, school or even their day-to-day activities.

What can you **EXPECT**

At your initial visit, your chiropractor will ask questions about your health history and perform a physical exam, with particular attention to your spine. Your chiropractor may also recommend other examinations or tests, such as X-rays.
